Deloitte Consulting LLP
Technology and Innovation
Subject: Application for Full Stack Developer (Requisition Code: 185689)

Dear Hiring Manager,

I am writing to express my enthusiastic interest in the Full Stack Developer position at Deloitte. With my 4+ years of experience in software engineering, including significant experience with developing Salesforce Integrations and other technologies, willingness to learn multiple programming languages ranging from Python to Perl, and proven track record to be a key contributing to a multi-disciplinary team of federal employees and contractors, combined with my active Secret security clearance which will ensure a more straightforward process to obtain the Top Secret/Sensitive Compartmented Information clearance, I am confident that I possess the technical skills and dedication to excel in this role and contribute significantly to your team's success. I am eager to bring my skills and experience to your team and help achieve our shared goals.

In my current role at Marine Corps Community Services (MCCS) as a Junior Software Developer, I have been instrumental in accelerating the migration from a legacy Perl application to a modern Python/FastAPI stack. This involved mastering the existing legacy technology and collaborating closely with business analysts and external contractors to ensure a seamless transition. I also stepped up and led a cross-functional team to resolve a critical data integration issue, demonstrating my strong problem-solving skills, ability to diagnose complex problems, implement effective solutions, and take on responsibility beyond the call of duty. This experience aligns perfectly with your requirements.

My previous experience at Revature further solidifies my expertise in full-stack development. I successfully migrated over one million records between Pega applications, utilizing Python, Power BI, and advanced Excel, ensuring data integrity and comprehensive documentation. I also developed and deployed enterprise applications using Java, Spring Boot, and Angular, demonstrating my ability to work with diverse technologies and consistently deliver high-quality solutions. In addition, I have hands-on experience with Docker for containerization and Jupyter Notebook for data analysis and exploration, skills that would be valuable in developing and maintaining your search and analytics platform.

I am particularly drawn to Deloitte's commitment to innovation and its focus on solving complex challenges for government and public services clients. My experience working with government contracts at MCCS and my active Secret security clearance make me uniquely positioned to contribute to your mission-critical projects. I am eager to leverage my skills and experience to help your team deliver impactful solutions.

Thank you for your time and consideration.

Sincerely, Jose Michael Rubio
