Deloitte Consulting LLP
Technology and Innovation | Technology Strategy

Dear Hiring Manager,

I am writing to express my strong interest in the Product Manager position within Deloitte's Core Business Operations portfolio. As a software developer with experience in government systems and an active Secret clearance, I am particularly excited about the opportunity to contribute to Deloitte's emerging cloud practice and help shape the future of global enterprises.

In my current role as a Junior Software Developer at Marine Corps Community Services, I work directly with government stakeholders and cross-functional teams to deliver mission-critical solutions. I've demonstrated my ability to quickly adapt to new technologies while maintaining legacy systems, which aligns well with Deloitte's focus on both innovation and operational excellence. My experience working in government environments has given me valuable insight into the unique challenges and security considerations of public sector technology implementation.

During my tenure at Revature LLC, I collaborated with cross-functional teams to optimize user stories and manage product backlogs, skills directly relevant to the role's requirements. I worked extensively with Jira and other collaboration tools to facilitate efficient development processes, and successfully managed the migration of over a million records between applications. This experience showcases my ability to handle complex projects, manage dependencies, and drive data-driven decision-making.

My technical background spans multiple cloud technologies, including AWS, and I have experience with various aspects of the software development lifecycle (SDLC) and Agile methodologies. My business degree from Virginia Commonwealth University, combined with my ongoing computer science graduate studies at George Mason University, provides me with the broad perspective needed to bridge technical implementation with business objectives.

I am particularly drawn to Deloitte's commitment to making an impact that matters and creating trust and confidence in a more equitable society. Your focus on leveraging emerging technologies to accelerate mission execution aligns perfectly with my professional goals and experience.

While I currently hold a Secret clearance and understand the position requires TS/SCI, I am willing to undergo the necessary upgrade process. I am also comfortable with the required travel of up to 20% and am eager to contribute to your government and public services practice.

I would welcome the opportunity to discuss how my background in software development, business education, and government work would benefit Deloitte's Cloud Engineering team. Thank you for considering my application.

Best regards,
Jose Michael Rubio
