Office of Legislative Computer Systems

U.S. House of Representatives

Application for Software Engineer II Position

Dear Hiring Manager,

I am writing to express my interest in the Software Engineer II position with the Office of Legislative Computer Systems. With over three years of experience developing and maintaining enterprise applications and my demonstrated ability to work effectively across cross-functional teams, I am confident I can make valuable contributions to your Legislative Applications engineering team.

In my current role as a Junior Software Developer at Marine Corps Community Services, I have led the migration of a legacy Perl application on-premises to a FastAPI/Python system on AWS Cloud. I worked collaboratively with program managers, business analysts, and contractors to ensure alignment and facilitate smooth transitions, including comprehensive documentation of the entire process. This experience directly relates to your team's work in modernizing technology for legislative publications. My experience maintaining critical processes using Oracle SQL Developer (PL/SQL), Bash, Perl, and Python scripts has equipped me with the technical foundation to support your enterprise products.

At Revature LLC, I developed and deployed enterprise applications utilizing Java, Spring Boot, and Angular—frameworks directly aligned with your technical requirements. While I don't have direct experience with XML publishing tools such as XSLT and XSL-FO, my background in full-stack development provides a strong foundation to master these technologies quickly. My experience with cloud environments through AWS deployment would transfer well to your containerized application needs with Docker and Kubernetes. I also have experience with agile methodologies, enhancing product backlog quality and sprint efficiency by collaborating with cross-functional teams to optimize user stories based on iterative client feedback. My work migrating over one million records between applications while ensuring data integrity demonstrates my attention to detail and commitment to quality—essential for maintaining the critical systems supporting House operations.

My Secret Security Clearance and experience working within government-adjacent organizations have prepared me for the unique considerations of developing secure systems for government use.

I am pursuing a Master of Science in Computer Science, concentration in Artificial Intelligence and Databases Bridge Program via a Graduate Certificate at George Mason University and through other online courses, most recently completing training in FastAPI and Perl, demonstrating my commitment to continuous learning and adopting new technologies.

I would welcome the opportunity to discuss how my technical skills and collaborative approach would benefit your team and contribute to the critical work of the Office of Legislative Computer Systems. Thank you for considering my application.

Sincerely,

Jose Michael Rubio
